Project Title	DAK MANAGEMENT SYSTEM
Project Brief/Abstract	

The DAK Management System is a simple and effective tool to manage official letters, documents, and file tracking in an organization. It helps keep all incoming and outgoing communications organized in one place, making it easy to follow up and stay on track.

The system includes helpful features like a search option to quickly find any document, an edit function to make updates, and tools to categorize and prioritize tasks. It also lets users track the progress of letters and files and see their current status.

With its easy-to-use design, the DAK Management System saves time, reduces paperwork, and helps teams work better together while keeping a clear record of all communications.
